Performance Climate Changer™ CSAA Air Handlers
Dimensional Data for Sizes 3-120
Indoor and Outdoor Units

Introduction

Performance Climate Changer™ air handlers combine the Trane tradition of engineering excellence with the latest in manufacturing technology to give you an energy efficient air handler with superior performance, the highest quality and reliability, and the lowest installed cost in the industry. This air handler was designed to incorporate such features as component flexibility, integrated control options, and proven performance to give you the optimal system to clean, filter, dehumidify, heat, and cool your building.

Superior Performance

- ASHRAE 111 Class 6 low-leak casing design achieving less than 1.0 percent leakage rate at +/- 8 inches w.g.
- Less than L/240 @ +/- 8 inches w.g. panel and door deflection
- 2-inch R13 foam-insulated, mid-span thermal break panels and thermal break doors
- Casing thermal resistance ratio TR-value of 0.6
- New filter technology that exceeds LEED requirements and reduces filter pressure drops up to 50 percent versus previous designs

Industry-Leading Energy Efficiency

- AMCA 611-certified Traq airflow monitoring station
- Economizer section meets or exceeds all mandatory requirements prescribed by California Building Energy Efficiency Standard Title 24.
- Total energy-recovery wheels
- Cool Dry Quiet (CDQ™) desiccant dehumidification wheels
- Discharge plenums and plenum fan sections available with variable size, type, and location of openings to reduce static pressure loss and lower energy consumption
- 50,000 hour LED service lights
- Low-leak, high thermal performance casing design
- All airfoil-bladed and Traq dampers meet ASHRAE 90.1 lowest specified leakage requirements
- High-efficiency coil fins deliver superior heat transfer while allowing face velocities in excess of 625 fpm without moisture carryover

System Optimization

- Optimal design to meet the Trane EarthWise™ design philosophy incorporating high-efficiency air handlers and water chillers with low flow rates and low temperatures.
- Factory-engineered, -mounted, and -tested control packages with properly sealed casing openings.
- Variety of coil types with high-efficiency coil fins allow lower coil approach temperature and reduce chance of moisture carryover
- Ability to choose the exact number of fins per foot of coil surface to enhance heat transfer and air pressure performance
- Wide array of fan options including motorized impellers, direct-drive plenum fans, belt-drive plenum fans, and housed fans
- Control options to easily incorporate fan pressurization and demand control ventilation strategies.
- Design and analysis tools provide whole building analysis, acoustical design guidance, equipment performance data, and suggested control strategies to help achieve optimum system design with tailored energy, IAQ, and project budget solutions.

Highest Quality

- UL/CUL listed
- AHRI Standard 430-certified air-handling unit
- AHRI Standard 410-certified coils are all factory tested
- AHRI Standard 1060-certified energy wheels
- All fans are dynamically balanced in the horizontal and vertical planes
- All fans with VFDs undergo inverter balancing
- Formulated panels and integral base frame minimize seams that could introduce air leak paths
- Integrated raceway for wiring protection
- Integrated, fully-enclosed control panel for starters, VFDs, and unit-mounted controllers
- Pre-engineered, factory-mounted controls, including end devices, motor controllers, VFDs, unit-mounted DDC controllers, Traq™ damper ventilation control section, UL-listed turnkey control packages

Lowest Installed Cost

- Lifting lugs included on the integral base frame
- Indoor units ship with skid designed for forklift transport
- Variable height, size, type, and location of openings on discharge plenums minimize duct transitions
- Factory-installed interoperable controls shorten construction cycles, simplify job-site coordination, reduce installation time and expense, and provide single-source responsibility for warranty and service issues
- Single-point power is available with high-voltage distribution block and external main unit disconnect with lockout/tagout capabilities.
- External service module with 15 amp GFCI receptacle, light switch
- Controller display and communications port
- Quick-connect wiring minimizes installation costs and provides wiring integrity between sections
- Factory-installed conduit connectors eliminate penetrations in the wrong location
- Motor leads can be run through flexible metal conduits to external motor junction box.
- Building Information Modeling (BIM) drawings to minimize jobsite ductwork, electrical, piping and structural interference

Duct supports designed into factory roof curbs for pre-connection of ductwork

Service Clearance Recommendations

A minimum clearance of the section width plus 12 inches on the access door side of the heat section is recommended for routine maintenance. This clearance provides enough room to replace the heat exchanger in the event of failure. The section side panels must be removed to access the heat exchanger. Refer to figure below for service clearance recommendations for the air handler.

Note: At a minimum, the above clearance dimensions are recommended on one side of the unit for regular service and maintenance. Refer to as-built submittal for locations of items such as filter access doors, coil, piping connections, motor locations, hoods, pipe cabinets, etc. Sufficient clearance must be provided on all sides of unit for removal of access panels, plug panels, or section-to-section attachment brackets. Clearance for starters, VFDs, or other high-voltage devices must be provided per NEC requirements.

Note: For specific dimensional and weight information, refer to the unit submittals. The dimensions and weights in this manual are approximate. Trane has a policy of continuous product and product data improvement and reserves the right to change design and specifications without notice.

Note: ¹If the unit is installed on a roof curb, there is an additional 0.125-inch height from the drip lip. Unit height includes 6-inch base rail height. ²Unit width is the external unit width plus the lug dimension (6.81 inches). The unit roof length is equal to the total unit length plus 1.5-inch overhang on each end (unit length plus 3 inches).

Note: ¹Shipping split flange dimension is for shipping planning purposes only and does not add to installed overall unit length. ²Base line includes the height for standard 2.5-inch integral base frame on unit sizes 3-57 and 6-inch integral base frame on unit sizes 66-120. ³Drain pan connection dimension is nominal pipe size. IAQ drain pain connections can be either LH or RH, but not both.

Note: ¹Shipping split flange dimension is for shipping planning purposes only and does not add to installed overall unit length. ²Base line includes the height for standard 2.5-inch integral base frame on unit sizes 3-57 and 6-inch integral base frame on unit sizes 66-120. ³Drain pan connection dimension is nominal pipe size. IAQ drain pan connections can be either LH or RH, but not both.

Notes: The base line includes 2.5-inch base rail for unit sizes 21 - 30, 2-inch base rail for unit sizes 35 - 57 and 4.5-inch base rail for unit sizes 66 - 120.
Due to the fact that the base rail is integral to the unit. For coil connection information for refrigerant coils, refer to the submittal information provided from the Trane Official Product Selection Software (TOPSS™) program.

Note: ¹Shipping split flange dimension is for shipping planning purposes only and does not add to installed overall unit length. ²Base line includes the height for standard 2.5-inch integral base frame on unit sizes 3-57 and 6-inch integral base frame on unit sizes 66-120. ³Drain pan connection dimension is nominal pipe size. IAQ drain pan connections can be either LH or RH, but not both.

Fans/Motors

Special note about the Precision Motor HP option: To use these tables, the nameplate HP of the motor and the VFD—both of which will be greater than the Precision Motor HP—must be known.

Starter/VFD Weights

With the exception of motorized impellers, fan weight does not include starter/VFD weight. See [Table 76](#) for approximate starter/VFD weight.

Table 76. Approximate starter and VFD weights per horsepower (lbs.)

Note: ¹These weights represent the largest available starter. ²VFD weights include transformer, distribution block, and enclosure.

Motor Weights

Fan weights provided in this manual include the heaviest ODP (open drip-proof) motor. In the case of motorized impellers, fan weights include the packaged motor.

Notes: Hinged on air entering side or air leaving side. Outward swing doors are dimensioned to door and inward swing doors are to door opening.

The base line does not include the height for mounting legs or add on base rails.

D side of the door to side of unit for outward, and side of the door opening to the side of the unit for inward

D2 bottom of the door to bottom of 2.5-inch base rail for outward, and bottom of the door opening to the 2.5-inch base rail for inward

C is the outside to outside dimension for the outward swing door. C is the opening dimension for the inward swing door.

F is the outside to outside dimension for the outward swing door. F is the opening dimension for the inward swing door.

Note: If the unit is installed on a roof curb, there is an additional 0.125 inches height from the drip lip. The unit roof length is equal to the total unit length plus 1.5 inches. Overhang on each end (unit length + 3 inches). Unit height includes 6 inch base rail height. Unit width is the external unit width + the lug dimensions (6.806 inches).
